

Whitepaper: Tether USD (USDT)

1. Introduction

Tether USD (USDT) is a TRC20 stablecoin pegged to the US dollar. This project aims to provide a fast, stable, and decentralized alternative for users needing dollar-pegged assets on the TRON blockchain.

2. Project Purpose

The primary goal of USDT on TRON is to facilitate stable and low-cost transactions, especially useful for decentralized finance (DeFi), remittances, and secure payments.

3. Technical Structure

USDT is implemented as a TRC20 token on the TRON blockchain. The contract includes standard token functionality along with a custom price oracle integration, allowing updates to the pegged value of USDT as needed.

4. Tokenomics

- Name: Tether USD
- Symbol: USDT
- Decimals: 6
- Total Supply: Defined during deployment
- Mint/Burn: Controlled by the contract owner
- Oracle Price: Adjustable by the owner

5. Roadmap

Q2 2025: Contract deployment and verification on TRONSCAN

Whitepaper: Tether USD (USDT)

Q3 2025: Wallet integration and community building

Q4 2025: Listings on decentralized exchanges (DEXs)

2026: Partnerships and further development
